On the cover:

Lisa Miskelly, Associate Director for Food and Farm at Lafayette College, continues to harvest and distribute produce during COVID-19. Photo credit: Lafayette College

All of the images in this report are provided courtesy of the featured institutions. We are grateful to the 51 colleges and universities that shared images with us.

AASHE supports COVID-19 guidelines for mask-wearing and social distancing. Some images in this report were taken before COVID, and may not align with current standards.

Introduction

The 2020 Sustainable Campus Index (SCI) recognizes top-performing colleges and universities overall by institution type and in 17 sustainability impact areas, as measured by the Sustainability Tracking, Assessment & Rating System (STARS). STARS is a voluntary framework used by hundreds of colleges and universities to measure, report, and strengthen their contributions to global sustainability. The SCI also includes innovative and high-impact institutional highlights, and recognizes institutions with exceptional report accuracy and quality.

Student Green Advisors at Swarthmore College. Swarthmore's Office of Sustainability innovatively matches student Green Advisors with staff Sustainability Advocates to implement sustainability projects on campus.

Top Performers by Impact Area

Highest scores in 17 sustainability impact areas related to academics, engagement, operations and administration.

A LaFarm student employee harvesting tomatoes at Lafayette College, a Top Performer under Food & Dining (see [page 20](#)). Photo credit: Lafayette College

Air & Climate

Colorado College Office of Sustainability Interns proudly display the culmination of many of their efforts. The college achieved carbon neutrality on January 1, 2020. See Institutional Highlight on [page 53](#). Photo credit: Ian Johnson

Global climate change is having myriad negative impacts throughout the world, including increased frequency and potency of extreme weather events, sea-level rise, species extinction, water shortages, declining agricultural production and the spread of diseases. The impacts are particularly pronounced for low-income communities and countries. Institutions that inventory and take steps to reduce their air pollutant emissions can positively impact the health of their local communities and regions. This section covers greenhouse gas emissions assessment and mitigation and outdoor air quality.

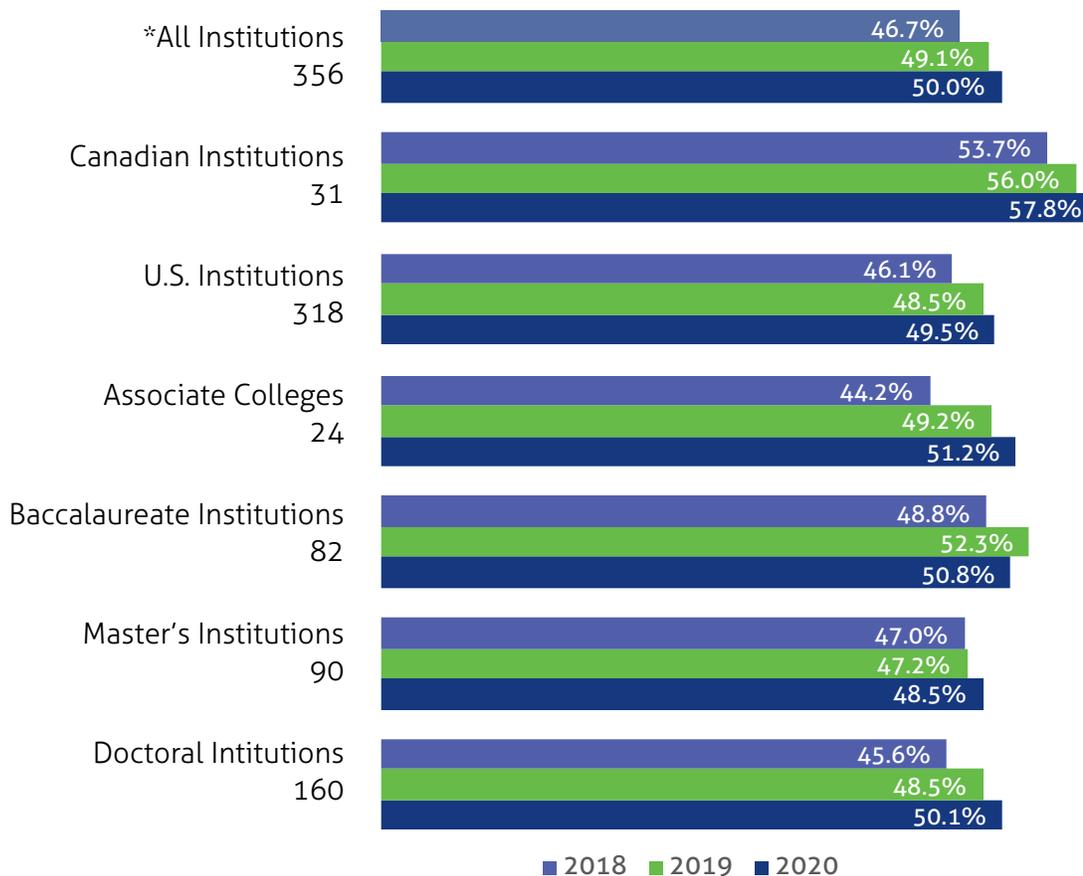

Air & Climate

Top Performers

Rank	Institution	Score	Type	Location

Average Scores

*Amounts listed here and in subsequent graphs correspond to 2020 counts.

Buildings

The Science and Engineering Building 2 at University of California, Merced, a Top Performer in Buildings, features solar panels that help power the building and provide shade during the hottest months, as well as a rooftop lab for researchers to gather data. Photo credit: Veronica Adrover

Buildings are generally the largest user of energy and the largest source of greenhouse gas emissions on campuses. Buildings also use significant amounts of potable water. Institutions can design, build and maintain buildings in ways that provide a safe and healthy indoor environment for inhabitants while simultaneously mitigating the building's impact on the outdoor environment. This section covers the maintenance and operations of existing buildings as well as new building design and construction.

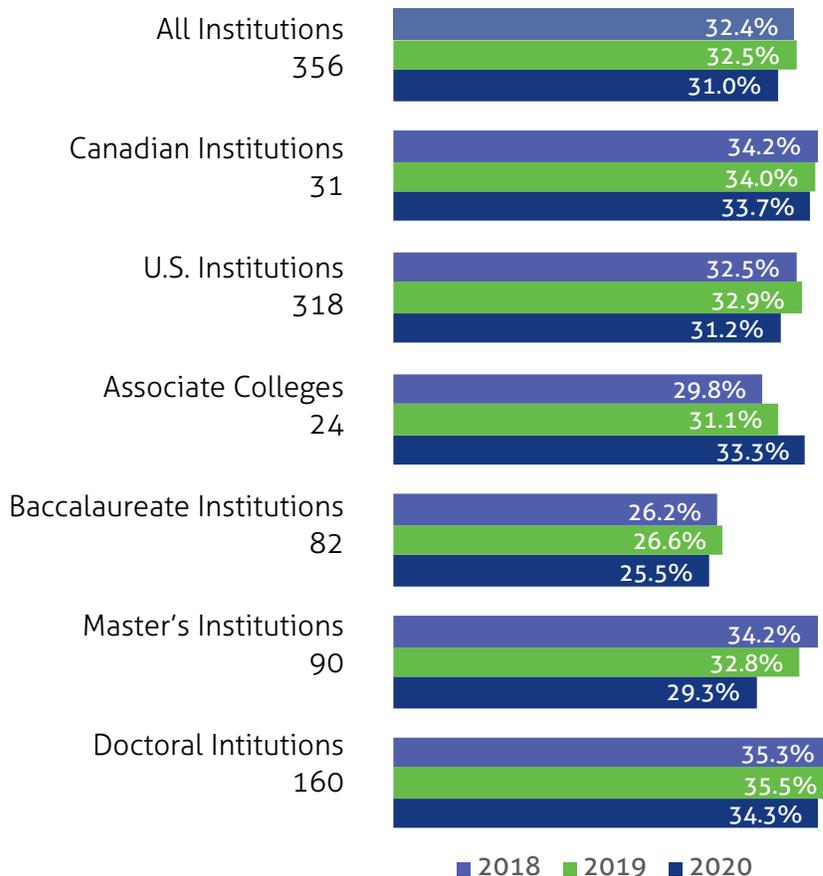

Buildings

Average Scores

Campus Engagement

The farmer's market at Cornell provides fresh, healthy food to the campus - and is completely run by students. Cornell is a Top Performer in Campus Engagement. Photo credit: Cornell University Photography

Engaging in sustainability through co-curricular activities allows students, faculty and staff to deepen and apply their understandings of sustainability principles. Co-curricular sustainability offerings help integrate sustainability into the campus culture and encourage behavior changes that promote sustainability. This section covers student and employee sustainability education programs and orientations, assessment of sustainability culture, outreach materials and campaigns.

Coordination & Planning

Polytechnique Montréal's Sustainability Office organized a series of activities to involve the community in co-constructing the institution's 2020-2024 Sustainability Action Plan. See Institutional Highlight on [page 57](#). Photo credit: Polytechnique Montreal

Coordination and planning help institutions organize, implement and publicize sustainability initiatives. These efforts help to provide the infrastructure to foster sustainability, establish priorities, guide decision making and budgeting, and clarify a vision for a sustainable future. This section covers sustainability planning, coordination and participatory governance.

Average Scores

Curriculum

Students applying sustainability science in the field at Unity College, a Top Performer in Curriculum. Photo credit: Unity College

Higher education institutions are uniquely positioned to understand and address sustainability challenges. Colleges and universities help equip students to lead society to a sustainable future by developing and offering learning opportunities in sustainability. This section covers courses, programs and learning outcomes in sustainability, living laboratory initiatives, immersive experiences, sustainability literacy and faculty development.

Average Scores

Diversity & Affordability

Dr. Dorceta Taylor engages students and community members in discussions on sustainable agriculture, food justice, inclusion and diversity at Western Michigan University ([STARS Silver](#)).

Higher education opens doors to opportunities that can help create a more equitable world and must be accessible to all regardless of race, gender, religion, socioeconomic status and other differences. A diverse body of students, faculty and staff provide rich resources for learning and collaboration. This section covers diversity coordination, assessment for campus equity, discrimination response, higher education affordability and access, increasing faculty diversity, and support and recruitment of underrepresented students, faculty and staff.

Average Scores

Energy

Cal Poly students conduct research at the Gold Tree Solar Farm. See Institutional Highlight on [page 50](#). Photo credit: Tony Tran

For most institutions, energy consumption is the largest source of greenhouse gas emissions. Implementing conservation measures and switching to renewable sources of energy can help institutions save money and protect them from utility rate volatility. Renewable energy may be generated locally and allow campuses to support local economic development. Furthermore, institutions can help shape markets by creating demand for cleaner, renewable sources of energy. This section recognizes energy reduction and development and use of clean and renewable energy sources.

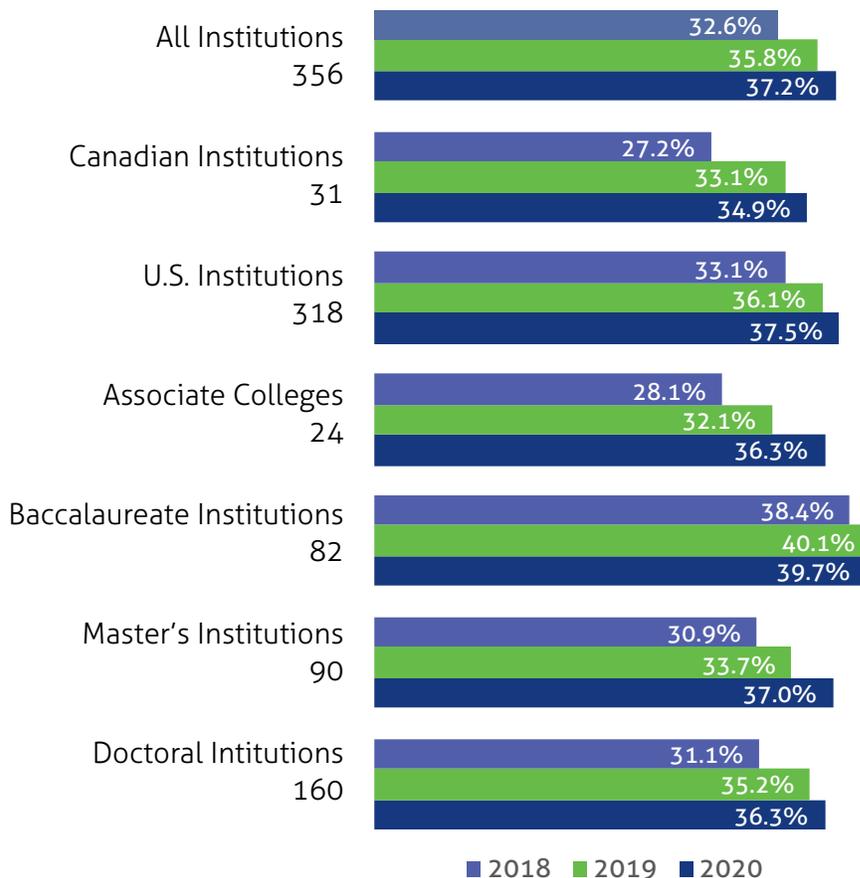

Energy

Average Scores

Food & Dining

Julieta Rendon Mendoza '21 and Dining Staff serve picadas at Smith College's Climate Equity and Justice Conference Opening Reception. Smith College is a Top Performer in Food & Dining. Photo credit: Claire Seaman '20

Institutions can use their food purchases to support local economies, encourage environmentally friendly and humane farming methods, help eliminate unsafe working conditions and alleviate poverty for farmworkers. These actions help reduce environmental impacts, preserve regional farmland, improve local food security, support fair and resilient food systems and reduce food waste. Dining services can support sustainable food systems by making low impact dining options available and by educating customers about more sustainable options. This section covers meatless dining, and sustainable food and beverage purchasing and practices.

Average Scores

Barnard students head attend the 2019 NYC Climate Strike. In 2019, Barnard College published a Climate Science Guide for the responsible divestment of endowment funds away from fossil fuel companies that dispute climate science. See Institutional Highlight on [page 50](#). Photo credit: Jonathan King

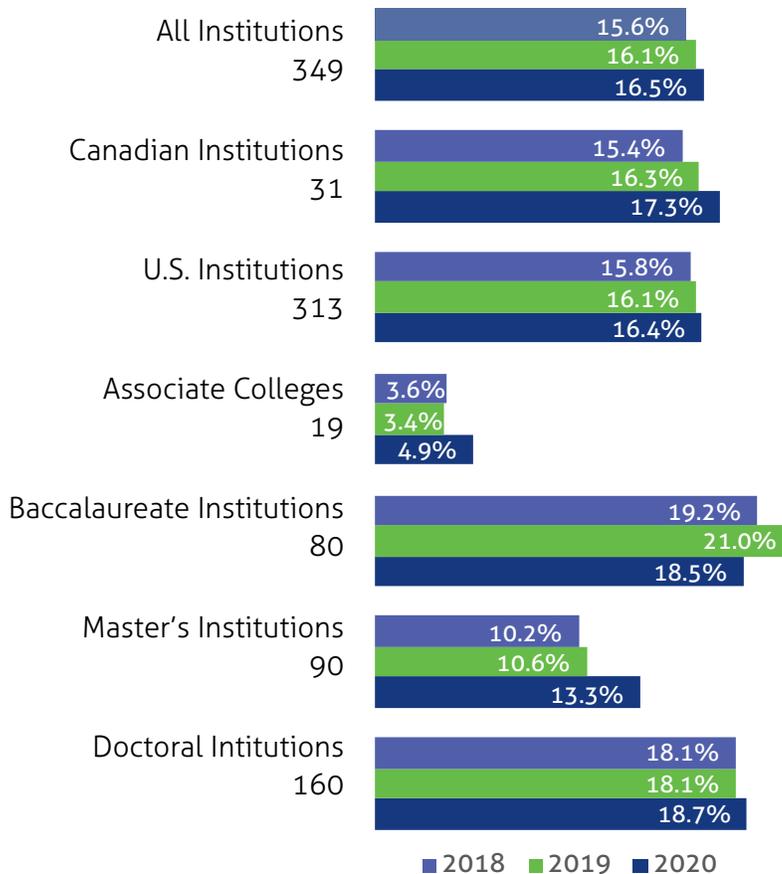

Collectively, colleges and universities invest hundreds of billions of dollars, and the impacts from investments are both local and global in scope. Using transparent and democratic investment processes can improve the long-term health of institutional endowments, encourage better corporate behavior, support innovative product development and help build a more just and sustainable financial system. This section covers sustainable investment, committees for responsible investing and investment disclosure.

Average Scores

Public Engagement

Indiana University-Purdue University Indianapolis (IUPUI) students volunteering during the IUPUI Day of Caring. IUPUI is a Top Performer under Public Engagement. Photo credit: Liz Kaye, IU Studios

Engagement in problem-solving with community members and organizations in the governmental, nonprofit and for-profit sectors encourages widespread solutions to sustainability challenges. Public engagement can help students develop leadership skills while deepening their understandings of practical, real-world problems and the process of creating solutions. This section covers community and inter-campus partnerships, continuing education, community service, public policy participation and trademark licensing.

Purchasing

California State University, East Bay invested in reusable serviceware for the campus community. The California State University system passed a system-wide policy in 2019 that applies to all 23 CSU campuses in banning the institutional purchase of all single-use plastics. See Institutional Highlight on [page 51](#). Photo credit: Garvin Tso

Collectively, institutions spend many billions of dollars on goods and services annually. Each purchasing decision represents an opportunity for institutions to choose environmentally and socially preferable products and services and support companies with strong commitments to sustainability. This section covers general and commodity-specific sustainable purchasing policies, life cycle cost analysis, and purchase of electronics, paper and cleaning products.

Average Scores

A Portland State University researcher climbs a tree in the early morning to collect samples. Portland State University is a Top Performer under Research. Photo credit: Zach Putnam

Transportation

Locksmith Shop Electric Vehicle at Stevens Institute of Technology, a Top Performer under Transportation. Photo credit: Sarah Gilly

Institutions can positively impact human and ecological health and support local economies by modeling sustainable transportation systems. Transportation-related emissions and pollutants contribute to health problems which, due to disproportionate exposure, are frequently more pronounced in low-income communities near major transportation corridors. In addition, fuel extraction, production and distribution can damage environmentally and culturally significant ecosystems and may financially benefit oppressive governments. This section covers campus fleets, student/employee modal split and programs promoting sustainable transportation.

Average Scores

Waste

Volunteers at the “We All Live Here” campus clean-up day at Aquinas College, a Top Performer under Waste. Photo credit: Jessica Eimer Bowen

Waste reduction mitigates the need to extract virgin materials from the earth and reduces waste flow to incinerators and landfills that contaminate air and water, produce greenhouse gas emissions and tend to have disproportionate negative impacts on low-income communities. Source reduction and waste diversion also save institutions costly landfill and hauling costs. Campaigns for waste reduction can engage the entire campus community in contributing to tangible sustainability goals. This section recognizes waste minimization and reduction construction, waste diversion and hazardous waste management.

Water

Aerial view of University of Wisconsin-Madison and the Wisconsin State Capitol, surrounded by Lake Mendota and Lake Monona. See Institutional Highlight on page 65. Photo credit: Bryce Richter/UW-Madison

Water conservation and reuse, as well as effective rainwater management practices, are important in maintaining and protecting finite groundwater supplies. Pumping, delivering and treating water is a major driver of energy consumption, so institutions can help reduce energy use and the emissions associated with energy generation by conserving water. Water conservation and effective rainwater and wastewater management also reduce the need for effluent discharge into local surface water supplies, which helps improve the health of local water ecosystems. This section covers water use reduction and rainwater management.

Wellbeing & Work

Bike to Work Day at Santa Clara University, a Top Performer under Wellbeing & Work. Photo credit: Cara Uy, Center for Sustainability, Santa Clara University

An organization's character, capacity to perform and achievements are only as strong as that organization's community. Colleges and universities can bolster the strength of their communities by promoting the wellbeing of the campus community and by offering worker benefits, wages and other assistance that serve to respectfully and ethically compensate workers. This section recognizes student and employee wellness programs and employee compensation, satisfaction, health and safety.

Institutional Highlights

Antiracist Research & Policy Center -

The [Antiracist Research & Policy Center \(ARPC\)](#) at [American University](#) generates scholarly research, educational tools, and policy analysis geared towards dismantling racism in its many forms. Center staff and scholars work on multidisciplinary initiatives for fostering racial justice by forging relationships across the university, the D.C. region and beyond. The center's work includes a Faculty Affiliates program with eight thematic areas: Arts and Literature, Borders and Immigration, Civil Rights and Resistance Movements, Criminal Justice and Social Policy, Education, Inequality and Internationalism, Health and Environment, and Markets and Media. The center organizes events that put antiracist change agents in conversation and engages members of the public.

Staff members and students involved in antiracism work at the AU Antiracist Research & Policy Center. Photo credit: Tamara Darden

The Impact Clinic - The Impact Clinic at [Appalachian State University](#) is an applied learning initiative that partners teams of faculty and students with local business representatives to measure and manage businesses' environmental and societal impacts. The teams utilize a B Impact Assessment Tool to evaluate how the business' operations impact all stakeholders, including owners, consumers, workers, the local community, and the natural environment. Students participating in the clinic further their knowledge of sustainable practices, apply classroom learning to real-world issues, and often earn internships with the businesses upon graduation. Looking forward, the clinic is primed to partner with other North Carolina universities.

The Impact Clinic at Appalachian State University. Photo credit: Marie Freeman

Institutional Highlights

ASU Solar - The [solar program](#) at [Arizona State University](#) has over 50 MWdc equivalent of combined solar generating capacity from both on-site and off-site installations. More than half of total capacity is generated through the [ASU Red Rock Solar Project](#), a collaboration between ASU and Arizona Public Service (APS). The remaining capacity comes from 90 solar installations with over 83,000 PV panels spread across four campus locations and the ASU Research Park. ASU installed three large-scale PowerParasol™ canopies that provide pedestrian and event shade while generating electricity, thereby reducing the urban heat island, extending usable space on campus, and offering experiential learning and research opportunities. Solar installations on campus also provide nearly 6,000 shaded parking spaces and shaded seating in the softball stadium.

ASU Solar. Photo credit: Arizona State University Digital Marketing Manager

Geothermal Energy System - [Ball State University](#)'s geothermal conversion project replaced the university's now decommissioned coal-fired boilers and chilled water equipment with the nation's largest ground-source geothermal district energy system. This system simultaneously produces hot water and chilled water. Major features of the installation include two district energy stations at opposite ends of the campus, 3,600 boreholes located across 25 acres that are drilled to depths of 400 to 500 feet each, an extensive hot and cold water distribution loop, and new interfaces for buildings. This project provided thousands of direct and indirect jobs, has halved the campus carbon footprint, and is saving approximately \$2 million annually.

Geothermal pipes and monitoring screen in the north station. Photo credit: Ball State University

Institutional Highlights

Climate Science List - In 2019, [Barnard College](#) published a [Climate Science List](#), a 490-page reference guide for the responsible divestment of endowment funds away from fossil fuel companies that dispute climate science. The List was developed by Barnard faculty, students, and staff in partnership with Fossil Free Indexes and the Union of Concerned Sciences, and evaluates 30 of the largest publicly traded fossil fuel companies using six criteria to indicate the extent to which a company's words and actions support climate science, demonstrate an urgency to act, support the free flow of information, and provide transparency about their actions. This is a publicly available resource that other institutions can use to make similar considerations for their endowment investments.

Barnard community members gathered to spell out "1.5° C", the global average temperature increase that scientists agree humans should strive to remain below in order to prevent disastrous climate change. Photo credit: Jonathan King

Large-scale Solar Farm and Laboratory - The recently completed 4.5 megawatt [Gold Tree Solar Farm](#) at [California Polytechnic State University](#) is currently the largest solar array in the CSU system, generating nearly 25 percent of Cal Poly's total electricity needs. In addition to saving \$17 million annually in utilities, the project is financing construction of a new laboratory and supporting academic partnerships. During the solar project's RFP process, academic departments were engaged to identify programmatic needs and opportunities for integration. These negotiations resulted in an academic agreement and the creation of an engineering and microgrid teaching laboratory. The lab will be used to teach engineering design fundamentals and advanced energy storage and microgrid applications.

Sheep grazing at the Cal Poly Gold Tree Solar site. Photo credit: Tony Tran

Institutional Highlights

System-wide Single-use Plastics Policy

- The California State University system passed a new [system-wide policy](#) in 2019 that applies to all 23 CSU campuses in banning the institutional purchase of all single-use plastics. Plastic straws and plastic bags are banned as of January 2019, and bans will go into effect for styrofoam by 2021 and plastic water bottles by 2023. These items are to be replaced by reusable, compostable, or recyclable ware, with exceptions made in compliance with the Americans with Disabilities Act. By centering waste reduction, this policy aims to also minimize the degradation of Pacific marine life. This policy is referenced by three CSU institutions that submitted reports in 2019-2020: [California State University, East Bay](#), [California State University, Channel Islands](#), and [San Jose State University](#).

CSU East Bay Sustainability Director Jillian Buckholz fills a reusable water bottle at a refilling station. Photo credit: Garvin Tso

Living Community Challenge Commitment

- [California State University, Monterey Bay](#) has demonstrated leadership in becoming the first higher education campus to commit to the Living Community Challenge, a master planning framework that incorporates regenerative design strategies. The Living Community Challenge is organized into seven performance areas (or petals), covering place, water, energy, health & happiness, materials, equity, and beauty. Each performance area includes requirements on topics such as agriculture on campus, human-powered mobility, and biophilic environments. The Living Community Challenge provides specific measurements on the “softer” aspects of building construction while providing aspirational targets that help meet commitments related to reduction of energy, waste and water.

CSU Monterey Bay implemented a pilot laundry to landscape project that included artwork depicting the interplay between water systems, the built environment and the natural environment. Photo credit: Lacey Raak, Noah Sforza

Institutional Highlights

e-Badges - Students at [Central Community College](#) can earn e-Badges to demonstrate skills and knowledge in environmental stewardship. e-Badge opportunities are available at no additional cost for all fields of study and for all learners, and are earned by demonstrating proficiencies in both knowledge and applied skills. Earned e-Badges also appear on student transcripts and can be referenced in student employment applications. The program offers e-Badges for Leadership in Environmental Stewardship, Problem Solving, Symbiosis, and Community Involvement. The e-Badge program launched in 2016 with six pilot courses. As of March 2020, 127 students were registered and 17 students have completed e-Badge requirements.

Maiden voyage for Central Community College Environmental Sustainability intern, Katy Ayers, on her eBadge project, the Myconoe, an 8' canoe grown from fungal mycelium. Photo credit: Megan Ayers

Living Lab Trail - In 2019, the [College of Lake County](#) inaugurated its 1.5-mile loop [Living Lab Trail](#) with interpretive signage across the campus and throughout its buildings. The purpose of the signage is to help campus visitors to appreciate what is involved with LEED certified buildings, geothermal heat exchange, solar PV, solar thermal, wetland and prairie restoration, bioswales, bicycle transportation options and ten dimensions of wellness. The signs connect sustainable campus features with opportunities to take similar actions at home or elsewhere in the community. They highlight similar actions taking place around the world, and connect sustainability features with educational and career opportunities.

Living Lab Trail tour at College of Lake County. Photo credit: Hillary Domke

Institutional Highlights

Carbon Neutral 2020 - [Colorado College](#) committed to carbon neutrality by 2020 in 2009 and has achieved that milestone this year. Through building renovations, adoption of 100% renewable energy on-site and locally, the construction of a net-zero energy/carbon library, and efficiency projects, the college has reduced on-site, scope 1 and 2 emissions by 75%, while also mitigating business travel and commuting, solid waste, waste water, and paper purchasing with investments in off-site projects that actively remove greenhouse gases from the atmosphere. Colorado College is located in a high carbon intensity electric grid, so renewable energy generation and use have significantly higher impacts within the region.

The Colorado College Net-Zero Energy/Carbon Tutt Library helped the college achieve the milestone of carbon neutrality on January 1, 2020. Photo credit: Jennifer Coombs

Ram Food Recovery Program - The [Ram Food Recovery Program](#) at [Colorado State University](#) aims to recover catered consumable food for distribution to food insecure community members. Advocacy among student leaders to address the issues of food insecurity and surplus food from catering events led to a working group that convened in 2019. The group found that changing campus policy was the best approach, and a guidelines and best practices document with a waiver was created. The program complies with safety standards and includes a timed notification system, making it possible for the university to support a food recovery program without assuming an unacceptable amount of liability. In summer 2019 alone, 52 food recovery opportunities were sent out, with average participation of 23 people per event.

Ram Food Recovery Program at Colorado State makes food leftover from catered events available to campus community members experiencing food insecurity. Photo credit: Colorado State University Photography

Institutional Highlights

ABC Framework for a Mentally Healthy Elon - In 2019, [Elon University](#) President Connie Ledoux Book announced that the university had adopted Act-Belong-Commit (ABC) as its framework to promote a campus-wide culture of holistic wellbeing and positive mental health. Developed in Western Australia, ABC helps to foster mentally healthy communities through three tenets: Act (do something); Belong (do something with somebody); and Commit (do something meaningful). Elon University is the first organization to implement the framework in the U.S., and the first university in the world to independently adopt it as the framework for a campus-wide wellness initiative. With several events having already taken place through the ABC framework, Elon is working to develop branding for the campaign and plans to host additional ABC trainings.

Sustainability in Prisons Project - The Sustainability in Prisons Project (SPP) is a partnership between [Evergreen State College](#) and the Washington State Department of Corrections, with a mission to empower sustainable change by bringing nature, science, and environmental education into prisons. The SPP's [Emergent Pre-Vegetated Mats Program](#) engages incarcerated individuals, prison staff, Evergreen staff, and other partners in growing native wetland plants in coconut fiber mats for wetland restoration. The inmate technicians assist in research related to the system's nutrient flow and input. In addition to providing inmate technicians with educational opportunities, skill development, career preparation, and reentry support, the program has made headway in restoring habitats for the federally threatened Oregon spotted frog.

Environmental & Social Innovation Program - The Environmental and Social Innovation Program at [George Washington University](#) provides GW students with an opportunity to research, design, and implement a project that addresses equity and justice related to environmental issues in the Washington, D.C. community. Students take a course titled "Community-Engaged Research to Promote Environmental Justice", where they research local issues and propose a project. Through grant programs including the Eco-Equity Challenge and DC Climathon, students design and implement their ideas with funding and mentoring support from GW faculty and staff. Research is conducted through a community asset-based approach and the program is sustained through community-based partnerships.

Elon University President Connie Ledoux Book discusses the importance of mental wellness at a two-day Mental Health Summit that marked the launch of the Act-Belong-Commit framework. Photo credit: Andrew Krech, Elon University

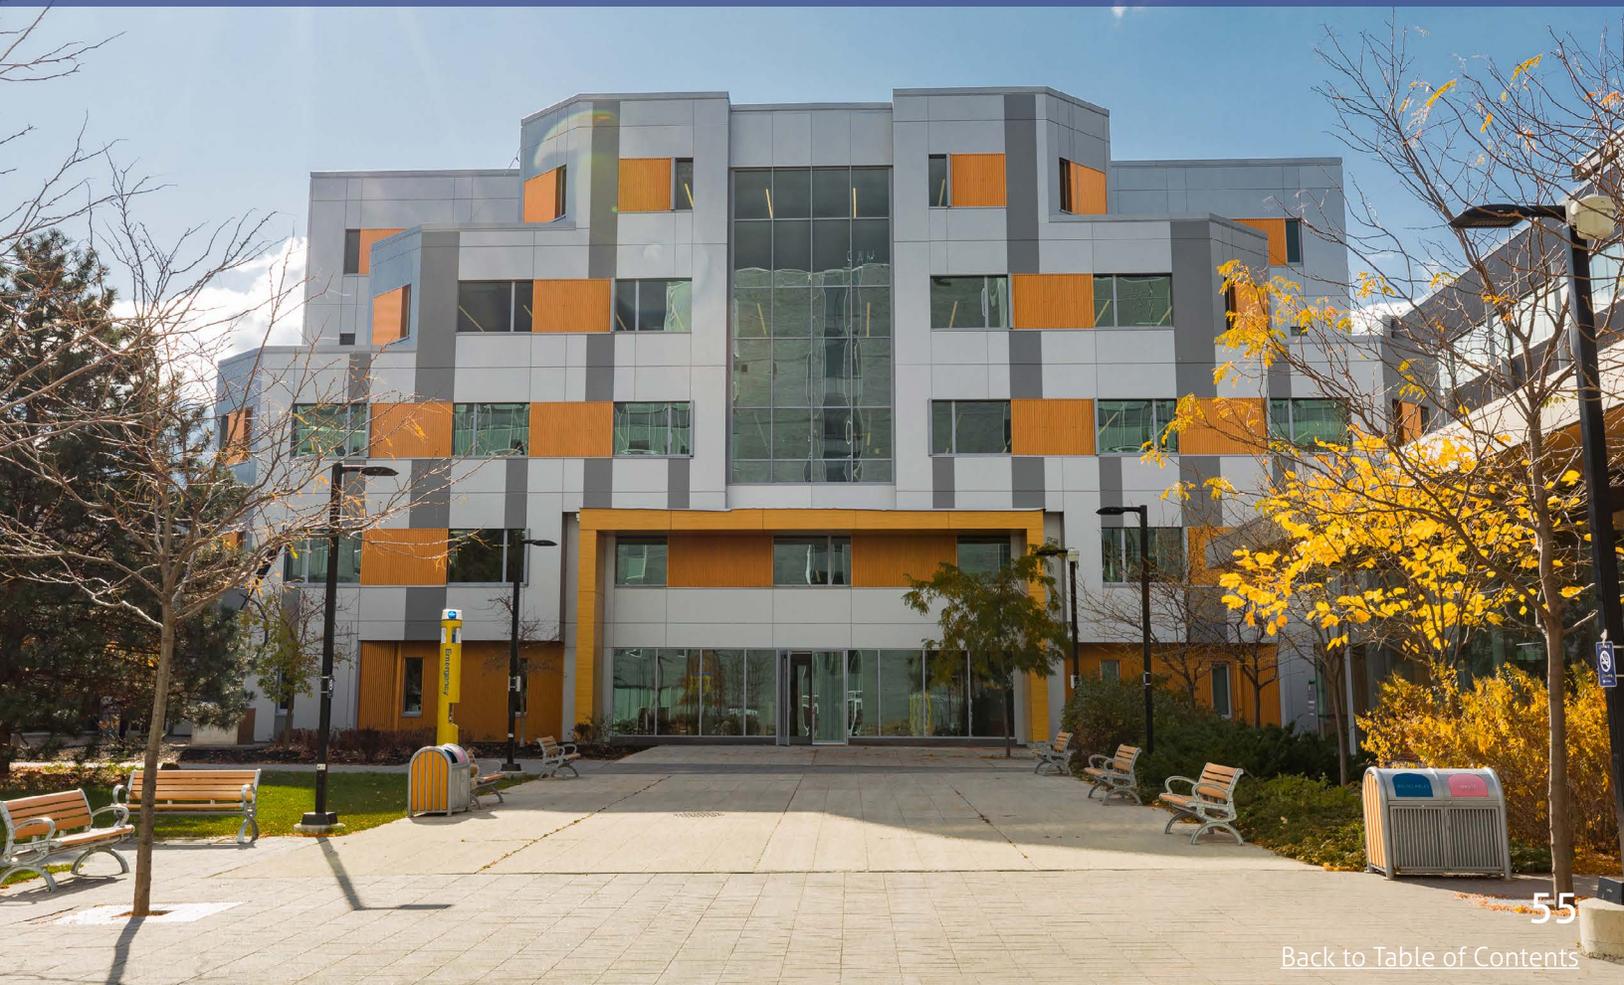

Institutional Highlights

NX Building Retrofit Project - Building NX at [Humber College](#) underwent a major retrofit to become one of the most energy-efficient buildings in North America, while also claiming the title of Canada's first retrofit to achieve Zero Carbon Building Design Certification from the Canada Green Building Council. The highly-insulated and airtight design was informed by the college's 20-year Integrated Energy Master Plan, with measures that reduce energy consumption by 70%, along with reductions in water consumption and greenhouse gas emissions. A new roof-mounted photovoltaic system generates approximately 31,500 kWh annually, and excess energy is fed into the campus central plant to be used by other buildings. The Building NX retrofit is seeking Passive House Certification.

Commercial Food Compost Program - [Indiana University-Purdue University Indianapolis](#) has an ongoing partnership with [Butler University](#) to employ a large waste hauler for food waste compost collection. Both universities leveraged their respective networks to add more organizations to the pick-up route. In 2016, proceeds from winning a [sustainability competition](#) were used to create a grant that trained and recruited additional campuses and businesses into the composting network. In addition to IUPUI and Butler, 10 other Indianapolis institutions and businesses are participating: Ivy Tech Culinary College, Indy Zoo, Duos, Patachou Restaurants & Prep Kitchen, Sunking Brewery, Burger Fuel, Allison Transmission, Rolls Royce, Raytheon, and Roche Diagnostics. In 2019, IUPUI was able to divert 29 tons of food waste compost from incinerators and landfills.

Institutional Highlights

Fossil Fuel Divestment - The Board of Trustees at [Lewis & Clark College](#) voted unanimously to divest from fossil fuel holdings in the endowment, passing a resolution in 2018 after multi-year conversations and study. The trustees affirmed that Lewis & Clark could simultaneously meet the critical objectives of best-in-class endowment management as well as environmental leadership. Lewis & Clark's [fossil fuel divestment policy](#) states that no new investments in any new fund with exposure to fossil fuel companies would be made, and over the next five years, exposure to fossil fuel companies held indirectly would be eliminated. The policy commits to engaging with investment managers to promote fossil fuel-free investment options, and annual updates to the broader campus community on fossil fuel holdings.

Student protest for fossil fuel divestment. Photo credit: LC Staff

Measuring Sustainable Business and Corporate Social Responsibility - In 2019, the [New York University](#) Stern School of Business's Center for Sustainable Business established two innovative ways of measuring sustainability among corporations. First, the [Sustainable Market Share](#) Index captures the sales of sustainability-marketed consumer products, revealing significant growth in the popularity of sustainable products over conventional counterparts within the past decade. The second tool is the [Return on Sustainable Investment \(ROSI\)](#) Methodology, which quantifies the material benefits and measurable savings for companies to pursue certain sustainability practices. Both initiatives have been recognized as innovative advancements in the realms of sustainable business and corporate social responsibility.

The ROSI methodology, developed by the Center for Sustainable Business at NYU Stern, provides a framework for quantifying the material benefits and savings for companies pursuing sustainability practices.

Institutional Highlights

Accessibility Training and Certification -

In 2018, [Nova Scotia Community College](#) partnered with the Rick Hansen Foundation (RHF) to offer an Accessibility Assessor training course, making NSCC one of the first two institutions in Canada to deliver this course. Participants were trained to evaluate a building's specific features in order to measure the overall level of meaningful access of a site for persons with physical, sensory, learning and developmental disabilities. NSCC enrolled two staff in the pilot program, and both have since received RHFAC Professional designation. In June 2019, the Ivany campus at [Nova Scotia Community College](#) was awarded a RHF Accessibility Certification, making it one of the first three sites in Nova Scotia to be certified.

Students of the Rick Hansen Foundation Accessibility Certification™ Program (RHFAC) at NSCC. Photo credit: Nova Scotia Community College

PolyCarbone Climate Activist Group -

The PolyCarbone program was founded by a group of Engineering graduate students at [Polytechnique Montréal](#). Since 2017, PolyCarbone has helped the Polytechnique Montréal community fight climate change by organizing a number of programs and activities, including a vegetarian challenge (Défi végété), a zero food waste challenge (Défi zéro gaspi), a accompanying second-hand clothing campaign (#demarquetoi). They are also working on a mobile application to support the adoption of more sustainable individual habits, a system of tradable carbon credits based on individual behavior changes, and more. The organization is currently working to expand its scope beyond the campus community to promote sustainable behavior and combat climate change across the province of Quebec.

Members of the PolyCarbone program. Photo credit: PolyCarbone – Polytechnique Montréal

Institutional Highlights

Housing Crisis Mitigation Plan - [San Jose State University](#) laid out a plan in January 2020 to address the housing crisis that affects SJSU students, faculty, and staff, due in part to the high cost of living in the region. The plan includes over \$3 million in grants for student housing insecurity and basic needs support from the California State University system, and the development of new housing for undergraduate and transfer students. In addition, the State of California transferred a surplus, obsolete building to SJSU, which will be used to develop up to 1,200 housing units for faculty and staff, graduate students, and students with families. Most units will be available at below market value.

Aerial view of San Jose State University. Photo credit: Javier Duarte

Wokini Initiative - The Wokini Initiative at [South Dakota State University](#) aims to increase the number of enrolled American Indian students, support their academic success, and boost their graduation rate. The groundwork for Wokini began in 2016 and a program director was hired in 2018. Successes to date include having hired an American Indian student recruiter, the establishment and awarding of numerous Wokini student scholarships, establishment of faculty and staff Wokini Challenge Grants, construction of a new American Indian Student Center, and cultural competence trainings for faculty, staff and researchers provided by the Wokini Office, American Indian Student Center and American Indian Studies program. The initiative is funded through SDSU's share of revenue from the South Dakota Permanent Trust Fund.

The Wokini Initiative supports American Indian students at SDSU. Photo credit: South Dakota State University

Institutional Highlights

Sustainable Eco-Recreation Project - The [Sustainable Eco-Recreation Project](#) at [Southern Illinois University Carbondale](#) aims to promote good water quality while providing novel forms of outdoor recreation. Student teams invented forms of recreation that aerate, cool, or manage nutrients to make lake waters healthier and more resistant to cyanobacterial harmful algal blooms. The design phase of the project involved three groups of engineering students developing in-lake solar fountains, pedal-powered fountains, and stationary bicycle-powered water flow through the wetlands, respectively. The program includes an interdisciplinary team of students, staff, and faculty across multiple departments and offices. A student-led committee secured funding for the project through the Student Green Fee.

Roadmap to Zero - In 2018, [Swarthmore College](#) convened a working group with representatives from Facilities, Sustainability, and other departments to develop the [Roadmap to Zero](#), an energy and utility master plan that will help the college realize its commitment to achieve carbon neutrality by 2035. Broadly, decarbonizing an energy system calls for three steps: deep energy efficiency; switching to zero-carbon electricity; and electrifying heating, cooling, and transportation. The master plan calls for construction of a new central plant and geexchange field, in addition to building system upgrades. This conversion of heating and cooling, combined with renewable electricity procurement, will cut scope 1 and scope 2 greenhouse gas emissions at Swarthmore by 98%.

Solar Community and Microgrid - In 2019, the [University of Alabama at Birmingham](#) opened its Urban Multisource Microgrid, a neighborhood that showcases [the UAB Surviv\(AL\) house](#) built for the 2017 US Department of Energy Solar Decathlon competition. The site features several retrofitted micro homes, a community garden, and renewable energy installations that power a microgrid completely independent from municipal electric utility. The demo site promotes the benefits of a microgrid system, such as carbon emission reduction, renewable energy generation, and holistic sustainable living principals. The site is managed by student and faculty researchers while also offering educational tours and STEM educational courses to all visitors, including children, homeowners, and energy professionals.

UAB Solar House. Photo credit: Hadley Turner

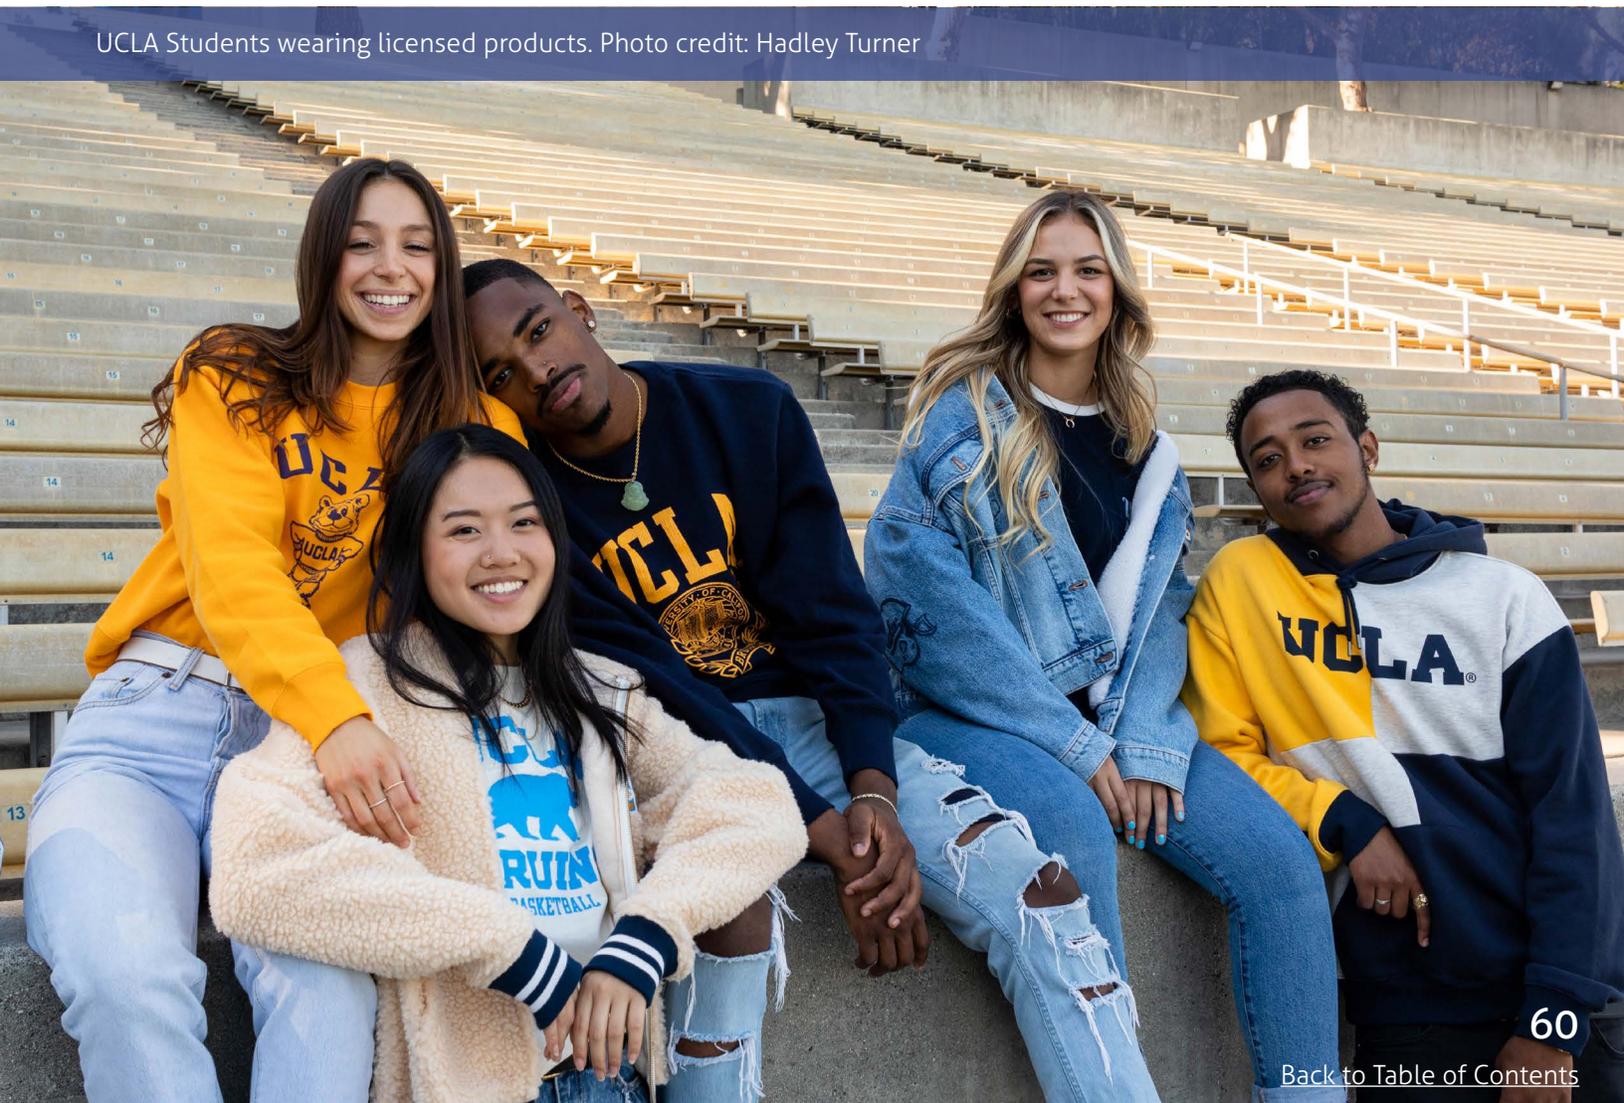

Institutional Highlights

Bike Friendly Platinum & Sustainable Fleet Certifications - [University of California, Davis](#) reaffirmed its Bicycle Friendly Platinum certification in 2017. Since initially going Platinum in 2013, UC Davis has removed outdated bike racks and placed 5,000 new models, given out thousands of free bike lights, expanded the vehicle traffic restriction zone, and made other improvements. UC Davis [promotes bicycling](#) by providing more than 30,000 bicycle parking spots, offering 24 daily parking permits per year for people who commit to commuting by bike but occasionally need to drive, and maintaining a large network of bike paths and bicycle-preferred roads. The UC Davis campus fleet is also one of the first institutions to earn [Sustainable Fleet Management certification](#) through the NAFA Fleet Management Certification.

Aligning Trademark Licensee Renewal with Social Performance - [University of California, Los Angeles](#) measures the performance of trademark licensees according to social sustainability metrics, and is using this information in trademark license renewal decisions. Using data on each licensee's ability to provide transparent, safe and fair workplaces and supply chains, UCLA reduced its licensee base by more than 50% with no loss of revenue. A qualified group of 145 companies have demonstrated the willingness and ability to develop management systems that meet UCLA's code of conduct standards. In 2020, UCLA Trademarks and Licensing is going beyond social sustainability with a new assessment, EcoVadis, that encompasses social and environmental sustainability, ethics, and sustainable procurement practices of licensees.

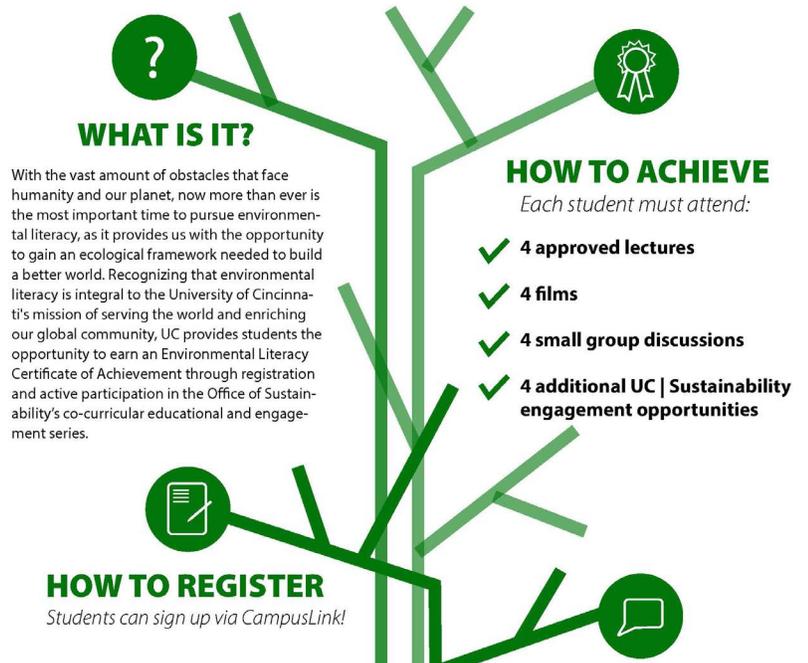

UCLA Students wearing licensed products. Photo credit: Hadley Turner

Institutional Highlights

Environmental Literacy Certificate Program

The Office of Sustainability at [The University of Cincinnati](#) provides students the opportunity to earn an Environmental Literacy Certificate of Achievement through registration and active participation in the office's co-curricular educational events and programs. The certificate program equips students with foundational knowledge related to sustainability, ecological principles, and systems thinking through required attendance to at least four approved lectures, film screenings, small group discussions, and engagement opportunities. The co-curricular, not-for-credit certificate is free for all students, is completed outside of class, and can be completed anytime during a student's academic career.

Environmental Literacy Certificate of Achievement at University of Cincinnati.

Sustainable Dining Certifications -

[University of Connecticut](#) is among the first public universities in the US to achieve sustainable dining certification at [all of its campus dining halls](#). As of 2017, all eight residential dining units have earned two-star or three-star certifications through the Green Restaurant Association (GRA). The GRA Certified Green Restaurant designation recognizes facilities that meet standards in conserving energy and water, reducing food waste, reducing and recycling waste, and other measures. Notable features at UConn dining halls include a living wall of herbs; a food waste diversion partnership with a renewable energy digestion facility; LED lighting, vegetarian and vegan main dishes, locally sourced food, high efficiency sprayers, and renewable energy certificate (REC) products.

UConn dining composting in action. Photo credit: University of Connecticut

Institutional Highlights

Clean Energy Corps - The [Clean Energy Corps](#) at [University of Massachusetts Amherst](#) is a student-centered initiative within the [UMass Clean Energy Extension](#) (CEE) that annually trains and mobilizes students to work closely with Massachusetts municipalities, institutions and organizations, to help officials reduce emissions via building retrofits and comprehensive energy audits. As part of the Clean Energy Corps, several students conducted a greenhouse gas emissions inventory for the university's Mt. Ida Campus, evaluating clean energy opportunities for energy reductions through system controls, space management, energy efficiency measures, and renewable energy generation. The team engaged with staff from state energy agencies, NGOs, and utilities throughout the process, and produced findings and recommendations in a final report and presentation to the university.

Clean Energy Corps students review architectural plans at University of Massachusetts Amherst. Photo credit: Ben Barnhart

Protecting Pollinators - The [University of Minnesota, Duluth](#) passed a [student-written policy](#) in 2017 that supports pollinator-friendly practices and native plants in perpetuity, while halting the use of synthetic pesticides. Three students pioneered the passing of a "Pollinator Pledge", a one-page policy that ensures that the university continues its commitment to grounds stewardship and pollinator protection despite anticipated turnover of students or staff that have supported this cause. The process entailed proposing and passing a resolution through the Student Association, submitting it to the administration for consideration, then establishing an official policy. UMD is now working to educate the campus community about the policy and its impacts.

Institutional Highlights

New Audubon Campus Chapters - In 2019, students at the [University of Mississippi](#) and Rust College created the first two National Audubon Society [campus chapters](#) in the region. The UM and Rust College chapters have formed a unique partnership focused on fostering opportunities for inclusion in the field of conservation in the complex setting of Mississippi. The UM chapter seeks to create a more mindful, diverse, and bird-friendly community at the University of Mississippi and surrounding areas. Students from Rust College were invited to attend a UM Earth Day Keynote delivered by Dr. J. Drew Lanham, [board member](#) for the National Audubon Society and Clemson University professor, whose research focuses include the African-American role in natural-resources conservation.

The Grow Pod Project - Launched in 2018, the Grow Pod at [University of Oregon](#) is a shipping container built out for high-productivity food growth that supports ongoing research, learning, and innovation for sustainable urban food production on campus. The Pod is outfitted for growing plants with a heating and cooling system, insulation, trays and racks, and an LED lighting system. In the first year of the project, students raised garden crops and seedlings that they planned to market to the campus community. In the project's second year, the Pod is being used as an engagement tool in academic residential communities focusing on environmental leadership and Native American and Indigenous studies.

Institutional Highlights

College of Engineering Indigenous Peoples Initiatives Community - The College of Engineering at [University of Saskatchewan](#) launched the Engineering Access Program in 2019 as part of the college's Indigenous Peoples Initiatives Community (IPIC). The program supports prospective and current Indigenous engineering students in three distinct initiatives: a year-long Pathways to Engineering support program for students that do not yet meet Engineering program prerequisites; a multi-day Summer Bridging Program; and a Student Success Program that offers social, academic and financial supports, including facilitated study sessions. The commitment to increase the number of Indigenous students in the College of Engineering is included in its newly updated [strategic plan](#), which identifies Indigenization as one of four strategic pillars.

PEER-certified Campus - In 2019, the Carl J. Eckhardt Combined Heating and Power Complex at [University of Texas at Austin](#) achieved record setting efficiency of 85%, in addition to achieving PEER (Performance Excellence in Electricity Renewal) recertification. UT-Austin first received [PEER certification](#) in 2014, becoming the first PEER-certified campus in the world. Modeled after the USGBC LEED green building rating system, PEER is a certification program that measures and improves power system performance and electricity delivery systems. The PEER rating system includes four credit categories: reliability & resiliency, energy efficiency & environment, operational effectiveness, and customer contribution. UT Austin also provides real time energy use data to its building occupants.

Institutional Highlights

Reduction in Chemical Use and Waste Water for Heating and Cooling - Between 2016 and 2017, the [University of Wisconsin–Madison](#) discontinued chemical treatments for lake water used in certain heating and cooling systems, and that water now flows from one lake to another in a process that mimics the natural flow of the local watershed. Both energy usage and emissions have been reduced, with an annual savings of over \$190,000. In addition, hundreds of small, foam balls that clean evaporator and condenser tubes were introduced in a trial chiller. This cleaning method increased cooling capacity and saved \$40,000 in natural gas. Once the foam balls are added to the additional three chillers, it is expected that the plant will save \$220,000 annually in natural gas reductions.

Alliance for Water Stewardship Partnership - The [University of Wisconsin-Milwaukee](#) has partnered with the Alliance for Water Stewardship (AWS) to develop the first curricular program in the nation dedicated to training students in professional water stewardship planning according to the AWS Standard. Through a pilot graduate course, students compiled site and watershed-related data, identified and interviewed local stakeholders to understand shared water challenges and risks, and drafted a water stewardship plan for the School of Freshwater Sciences and Main Kenwood Campus sites. The curriculum will be adopted for subsequent semesters to tackle two additional campus sites, furthering UWM's goal of being the first higher education institution in the nation to house an AWS-certified building.

Pictured are Erin Ganzke (left) and Christopher Dwyer, two University of Wisconsin-Milwaukee students that participated in the pilot graduate class for the Alliance for the Water Stewardship Program. Not pictured are other student participants: Hannah Burby, Spencer Charczuk, Megan Weller, and Kate Markiewicz. Photo credit: University of Wisconsin-Milwaukee

Institutional Highlights

Civic Identity Framework - Civic Identity serves as the overarching educational framework at [Warren Wilson College](#), and it prioritizes civic responsibility and sustainability as the core ethos for each graduate. There are explicit sustainability themes within the college-wide learning outcomes, which require students to be able to understand and contextualize complex issues, effectively engage in a pluralistic setting, commit to ethical integrity, justice, and equity, and collaboratively problem-solve with diverse partners upon graduation. Warren Wilson College is formally recognized as a [work college](#) by the U.S. Department of Education, with required participation in Work Crews to foster collaboration, and a regional community engagement project as civic responsibility in action.

Individualized Energy Dashboards for Students - Following the installation of Lucid Energy Dashboards and submeters on upper division housing, [Washington & Lee University](#) energy specialists have created dashboards for each housing space, and shared custom dashboard links with resident students. Students can easily review statistics on energy usage and see how they rate against neighbors in their village and across campus. The dashboards converted energy data into dollars, offering students a “real-world” picture of their energy use and costs. Rather than cash prizes for monthly energy-saving winners, the sustainability team worked with local restaurants and a local therapy dog operation to offer a catered dinner and an evening with one of the service dogs as a grand prize.

Time spent with a local therapy dog was among the top prizes for a recent Washington and Lee University Energy Competition. Photo credit: W&L Communications Office

Methodology

Top Performers

Top Performer scores are based on performance at the time of STARS report submission. All top performer data presented in this publication reference STARS Version 2.0, 2.1, and 2.2 reports submitted between March 7, 2017, and March 6, 2020. Reports submitted after this date are eligible for inclusion in future publications.

Top performers in each impact area were determined based on the percentage of applicable points earned within the relevant subcategory. Because one of the goals of this publication is to provide guidance for prospective students, institutions with valid STARS reports that are no longer operating have been excluded from the lists. For institutions with multiple valid reports, only scores from the most recent reports were considered. Ten institutions were identified in each list except in cases where scores were tied, in which case, more were listed. For some impact areas, tiebreaks (+) were determined based on institutions' pursuit of [Exemplary Practice credits](#) related to that topic. Under Campus Engagement and Coordination & Planning, new credits and standards were introduced with STARS 2.1 that better recognize top performance and create greater variation in scoring. As a result, Top Performers in those sections are based on Version 2.1 and 2.2 scores only.

AASHE staff reviewed all credits within a respective impact area for top-performing institutions in an effort to ensure that content met credit criteria. Staff requested follow-up for any identified issues and most institutions addressed them through data revisions or clarifications. Institutions that did not address identified issues have been excluded from the lists.

Institution Type

For the section on Overall Top Performers by Institution Type, four classifications (definitions listed below) were adapted from the [Carnegie Classification of Institutions of Higher Education](#)[®]. U.S. institutions were classified based on their most recent IPEDS classification. Since very few Tribal or Special Focus institutions participate in STARS, U.S. institutions with these formal classifications were placed in the most appropriate of the remaining categories. For institutions outside of the U.S., we relied on reported data found under the STARS Institutional Characteristics section.

- Associate Colleges - Institutions where all degrees are at the associate's level, or where baccalaureate degrees account for less than 10% of all degrees
- Baccalaureate institutions - Colleges and universities where baccalaureate degrees represent at least 10% of all undergraduate degrees and where fewer than 50 master's degrees or 20 doctoral degrees are awarded annually
- Master's institutions - Colleges and universities that award at least 50 master's degrees and fewer than 20 doctoral degrees annually
- Doctoral Institutions - Institutions that awarded at least 20 research/scholarship doctoral degrees annually, including doctoral degrees that qualify recipients for entry into professional practice

Reports from institutions recognized on the Top 10 lists for each institution type were not subject to the same review process conducted for top-performing institutions by impact area largely due to constraints of reviewing so many reports in full. The STARS website includes further details about [STARS data quality and reporting assurance](#).

Methodology

Institutional Highlights

The Institutional Highlights section recognizes projects and initiatives from institutions that submitted reports between March 2, 2019 and March 6, 2020 (previous submissions were considered in past SCIs). Initiatives were selected by a team of AASHE staff based on the level of innovation and overall impact in advancing sustainability, potential for replicability, and the added impacts this would present. With the release of STARS 2.2, an optional Points of Distinction credit was introduced that allows institutions to highlight up to three programs, initiatives, or accomplishments that best reflect their leadership for sustainability. Several highlights and images provided in this year's SCI were pulled from the contents of this new credit.

Average Scores

Each section of the SCI includes graphs presenting average scores for all institutions, along with 2020 counts, by country and by institution type. Counts vary slightly between Impact areas due to credit pursuit and applicability. This content corresponds to the same timeframe that was used to identify top performers. Average scores from past years were included for the first time in this year's SCI to allow for longitudinal comparisons and to highlight possible trends. For institutions that submitted multiple reports over this three-year period, only score information from their most recent, rated reports was included.

STARS of Data Accuracy

All STARS submissions receive a standard review by AASHE staff that covers approximately one-third of all STARS credits, and includes those credits that are most often misinterpreted (reports under a provisional Platinum rating receive a more comprehensive review). The institutions in this list are recognized for submitting reports in the last calendar year, between March 2, 2019 and March 6, 2020, with the fewest reviewed credits with issue(s) that required revision or clarification.

About STARS

STARS is a transparent, self-reporting framework for colleges and universities to measure their sustainability performance. It was developed by the Association for the Advancement of Sustainability in Higher Education (AASHE) with broad participation from the higher education community. STARS participants submit data to earn a Bronze, Silver, Gold or Platinum rating, or recognition as a STARS Reporter. The credits are organized into four categories: Academics, Engagement, Operations and Planning & Administration. As of March 2020, STARS reports were submitted by 520 institutions in 14 countries, covering 49 US States and eight Canadian provinces. All reports can be accessed at stars.aashe.org.

A Corporate Responsibility and Sustainability Summer School hosted at the American College of Greece, the first STARS-rated institution in Greece.

STARS of Data Accuracy

These institutions are recognized for submitting reports between March 2019 and March 2020 with the fewest data accuracy issues. We congratulate the STARS liaisons, data entry users, data providers and others who work to provide high quality information through STARS.
